Analysis - University of Crete

Informally, a manifold is a space that is "modeled on" Euclidean space.. There are many different kinds of manifolds, depending on the context. In geometry and topology, all manifolds are topological manifolds, possibly with additional structure, such as a differentiable structure. A manifold can be constructed by giving a collection of coordinate charts, that is a covering by open sets with ...

Manifold - Wikipedia

Of the countless number of texts entitled "Advanced Calculus", this is probably the most mathematically rigorous and challenging. Despite the title, this is a classic textbook written by two of the 20th century's preeminent mathematicians on the topic of abstract analysis in Banach spaces and the calculus of differentiable manifolds.

ADVANCED CALCULUS (REVISED EDITION): LYNN HAROLD LOOMIS

For the Brave and the Determined, learning analysis from Principles of Mathematical Analysis (PMA) is a sublimely rewarding experience. (Dilettantes keep away.)

Principles of Mathematical Analysis: Rudin: 9781259064784

In mathematics, topology (from the Greek *τόπος*, place, and *λόγος*, study) is concerned with the properties of space that are preserved under continuous deformations, such as stretching, twisting, crumpling and bending, but not tearing or gluing.. An n-dimensional topological space is a space (not necessarily Euclidean) with certain properties of connectedness and compactness.

In matematica, la nozione di tensore generalizza tutte le strutture definite usualmente in algebra lineare a partire da un singolo spazio vettoriale. Sono particolari tensori i vettori, gli endomorfismi, i funzionali lineari e i prodotti scalari.. Il primo utilizzo del concetto e del termine tensore avviene nell'ambito della meccanica dei continui, in connessione con l'esigenza di descrivere le ...

In matematica, in particolare nel calcolo infinitesimale, il differenziale di una funzione quantifica la variazione infinitesimale della funzione rispetto ad una variabile indipendente. Per una funzione f di una sola variabile, per esempio, il differenziale di f definito dalla 1-forma: $df = f'(x) dx$ (dove $f'(x)$ denota la derivata di f rispetto a x , ovvero il limite del rapporto incrementale / per ...
