Mass transfer is the net movement of mass from one location, usually meaning stream, phase, fraction or component, to another. Mass transfer occurs in many processes, such as absorption, evaporation, drying, precipitation, membrane filtration, and distillation. Mass transfer is used by different scientific disciplines for different processes and mechanisms.

Mass transfer - Wikipedia

The heat transfer coefficient or film coefficient, or film effectiveness, in thermodynamics and in mechanics is the proportionality constant between the heat flux and the thermodynamic driving force for the flow of heat (i.e., the temperature difference, \hat{T}): . The overall heat transfer rate for combined modes is usually expressed in terms of an overall conductance or heat transfer ...

The energy always moves from a warmer system to a colder system. The energy which is moving from one system to another is known as heat. The transfer or dispersion of heat can occur by means of three main mechanisms, conduction, convection and radiation:

Since resistance due to the wall and fouling is considerable lower than that imposed by the liquid films, and of these, the film heat transfer coefficient of the condensing steam is much higher than the other one, the controlling resistance in this system is that imposed by the inner liquid film.
