1-D signal processing (e.g., [1]â€“[4]). B. Multidimensional Derivatives For multidimensional signals, the derivative is replaced with the gradient: the vector of partial derivatives along each axis of the signal space. Consideration of this problem leads to an additional set of constraints on the choice of derivative filters.

The Burt pyramid algorithm is a potentially powerful tool for advanced television image processing, enhancement, coding, and restoration. In order to exploit this algorithm for the real-time processing of digitized NTSC television signals, where 10-15 MBytes; second data rates are typical and multidimensional processing is essential, a novel cascaded-filter pipe-line architecture was developed.
