The non-Gaussian noise sources are added in to the noise budget later. The end-user of an optical module does not care about noise statistics or device physics, but is interested in the minimum optical signal power he needs to achieve the system-level BER requirement.

Measurement of Optical Signal to Noise Ratio in Coherent Systems using Polarization Multiplexed Transmission White Paper Measuring Optical Signal-to-Noise-Ratio (OSNR) in live Dense Wavelength Division Multiplexing (DWDM) systems using polarization multiplexed transmission (Pol-Mux) is an unsolved challenge.

limited contrast and luminance, the presence of noise, and blurring due to fundamental physical effects. As a mathematical description of image blur, the MTF can be broken down into each component of the sensing, such as optics, detector, atmosphere, and display. This provides insight into the sources and magnitude of image degradation.

PDF | The signal-to-noise ratio obtainable at the receiver of a multimode optical fibre system may in some circumstances be dominated by an effect called "modal noise".

introduction to optical communication systems 3 The high carrier frequency of the optical carrier also has some drawbacks, especially as it relates, through the speed of light, to the optical wavelength (Table 1.1).
