Tetrahydrofuran (THF) is an organic compound with the formula (CH<sub>2</sub>)<sub>4</sub>O. The compound is classified as heterocyclic compound, specifically a cyclic ether. It is a colorless, water-miscible organic liquid with low viscosity. It is mainly used as a precursor to polymers. Being polar and having a wide liquid range, THF is a versatile solvent

Applications Electronic components. Polycarbonate is mainly used for electronic applications that capitalize on its collective safety features. Being a good electrical insulator and having heat-resistant and flame-retardant properties, it is used in various products associated with electrical and telecommunications hardware.

1. Introduction. Graphene-based materials are being intensively studied for a wide range of applications, from electronics, to composites and coatings , . Besides its outstanding optical and electronic properties, what makes graphene a unique material is its peculiar shape, a truly 2-dimensional material, with a lateral size spanning up to tens of microns and a thickness below 1 nm , .
