Electrospinning is a fiber production method which uses electric force to draw charged threads of polymer solutions or polymer melts up to fiber diameters in the order of some hundred nanometers. Electrospinning shares characteristics of both electro spraying and conventional solution dry spinning of fibers. The process does not require the use of coagulation chemistry or high temperatures to ...

4 AAN013 Blends are heterogeneous or incompatible if the components are present in separate phases. Usually the minor component is dispersed in a matrix of the dominant component.

Understanding Rheology of Thermoplastic Polymers

An organic solar cell or plastic solar cell is a type of photovoltaic that uses organic electronics, a branch of electronics that deals with conductive organic polymers or small organic molecules, for light absorption and charge transport to produce electricity from sunlight by the photovoltaic effect. Most organic photovoltaic cells are polymer solar cells.
