Trinity was the code name of the first detonation of a nuclear weapon. It was conducted by the United States Army at 5:29 a.m. on July 16, 1945, as part of the Manhattan Project. The test was conducted in the Jornada del Muerto desert about 35 miles (56 km) southeast of Socorro, New Mexico, on what was then the USAAF Alamogordo Bombing and Gunnery Range, now part of White Sands Missile Range.

EDF and AREVA have obtained for generic design acceptance for the EPR<sup>®</sup> reactor from the UK regulatory authorities. The UK EPR<sup>®</sup> design is based on the Flamanville EPR<sup>®</sup> (FA3) plant being built in France but incorporates a number of design changes agreed through the Generic Design Assessment with the UK Regulators. The UK Office for Nuclear Regulation has issued guidance defining the ...

PET has become an established method for medical research and clinical routine diagnostics. Development and availability of new radiopharmaceuticals specific for particular diseases is one of the driving forces of the expansion of clinical nuclear medicine providing early personalized diagnosis and efficient therapy.

Research is our business. With an unwavering focus on our missions, scientists and engineers at PNNL deliver science and technology. We conduct basic research that advances the frontiers of science.

### **PNNL: Research**

Thymidine kinase is a salvage enzyme that is only present in anticipation of cell division. The enzyme is not set free from cells undergoing normal division where the cells have a special mechanism to degrade the proteins no longer needed after the cell division. In normal subjects, the amount of thymidine kinase in serum or plasma is therefore very low.

### **Thymidine kinase - Wikipedia**

As noted above, most venoms are a complex mixture of components, including peptides, proteins and enzymes. As technology improved over the past century, it became easier and easier to analyze venoms and to separate and fully characterize the individual peptides and proteins.
