the bonding book one pdf

On 802.11 (Wi-Fi), channel bonding is used in Super G technology, referred as 108Mbit/s. It bonds two channels of standard 802.11g, which has 54Mbit/s data signaling rate.; On IEEE 802.11n, a mode with a channel width of 40 MHz is specified. This is not channel bonding, but a single channel with double the older 20 MHz channel width, thus using two adjacent 20 MHz bands.

Link aggregation - Wikipedia

Metallic bonding is a type of chemical bonding that rises from the electrostatic attractive force between conduction electrons (in the form of an electron cloud of delocalized electrons) and positively charged metal ions. It may be described as the sharing of free electrons among a structure of positively charged ions (.). Metallic bonding accounts for many physical properties of metals, such as ...
