constant. Water has a dielectric constant of $k=80$ and wood has a dielectric constant that can be as low as $k=2$. In short, we cannot rely on a specific dielectric constant for paper. Because of these concerns, we selected Teflon rather than paper for our dielectric material. Teflon is available in thicknesses and tolerances that are ...

It seems that addition of a small constant can have large effect when all the payoffs are close to zero (the status quo outcome), and that a further increase in the added constant has little effect as it moves all the payoffs away from zero.

Study of effects of constant observation of psychiatric in-patients. Constant observation is used in psychiatric practice mainly to prevent acutely ill in-patients from self-harm. All in-patients in a psychiatric hospital and a general hospital psychiatric unit who had been on constant observation over a 6 month period were identified (13 patients).

where C is a positive proportionality constant called capacitance. Physically, capacitance is a measure of the capacity of storing electric charge for a given potential difference $\hat{+}V$. The SI unit of capacitance is the farad (F): $1 \text{ F} = 1 \text{ farad} = 1 \text{ coulomb volt}^{-1} = 1 \text{ C V}^{-1}$. A typical capacitance is in the picofarad () to millifarad range, ().
