Foundations of mathematics is the study of the philosophical and logical and/or algorithmic basis of mathematics, or, in a broader sense, the mathematical investigation of what underlies the philosophical theories concerning the nature of mathematics. In this latter sense, the distinction between foundations of mathematics and philosophy of mathematics turns out to be quite vague.

In engineering, a foundation is the element of a structure which connects it to the ground, and transfers loads from the structure to the ground. Foundations are generally considered either shallow or deep. Foundation engineering is the application of soil mechanics and rock mechanics (Geotechnical engineering) in the design of foundation elements of structures.

The natural logarithm $\ln x$ is the logarithm having base e , where $e=2.718281828\dots$ (1) This function can be defined $\ln x = \int_1^x (dt)/t$ (2) for $x > 0$. This definition means that e is the unique number with the property that the area of the region bounded by the hyperbola $y=1/x$, the x -axis, and the vertical lines $x=1$ and $x=e$ is 1. In other words, $\int_1^e (dx)/x = \ln e = 1$.
